How to find Us

Trouble finding the place? contact Corey Ireland 0409 182 884

Welcome to Irelands Angus

Welcome to our 2013 Spring Sale.

We are excited to offer 65 bulls backed by Pedigree, Predictability and Performance.

Our program continues to prosper, we are seeing our new and home bred sires really coming into their own. 2013 has been an exciting year for us so far with Galaxy setting a new Australian record but more importantly some of the great programs in the country using him by AI. Another highlight was Turihaua, one of the oldest studs in New Zealand purchasing the NZ rights, this is a real endorsement.

This Spring, we are offering 65 16-18mth old bulls. All bulls have been semen tested, vet checked, Vibro and Pesti-vaccinated and Pesti-tested negative and either pedigree or tested free from any genetic defects- They are ready to work!

It has been our focus for 29 years to ensure weight in our cattle. "Length that weighs, weight that pays", 40-50 Kgs per head is very important at \$2/kg. We strive to keep the balance of weight and carcass quality in our bulls, without being extreme.

As we continue to develop our program it is so important to have great people involved. We are so fortunate to have a great team of people who work here and also all of the other individuals who contribute in any way. I would like to make special mention of Jess who has done a great job in re building our website and developing the way in which we supply you all the info that is required. Blake and Anita for there endless hours of hard work in keeping the operations of the program going each day. Willie who is forever thinking about how we can do things better and challenging us to do so. We are so grateful to you all for your commitment to what we do.

Unfortunatley, just as we were printing this catalogue the recent Genetic defect, Developmental Duplication (DD) has come into play. We have acted quickly to test all the bulls and are fortunate to have low percentages. To ensure all bulls are clean, we have sent for testing and will have a result by Sale Day.

We would like to take the opportunity to thank you for your interest in our program and cattle along with the clients who continue to support our program year in year out. Lets look forward to a great Spring.

We hope you enjoy the cattle, sale and hospitality. We wish you the best for the remainder of 2013.

Cheers,
Corey & Prue

Corey, Will, Blake, Charlie & Prue Ireland

Jess Fletcher

Anita Withers

Sale Information

INSPECTION

We invite anyone interested in the cattle to inspect them before the sale so we can give you the necessary time and information to ensure you are selecting the product right for your program. If you are unable to do so then inspections will be from 10:30am and sale time is 1pm Friday 13 September 2013. Please phone Corey to make a time suitable to inspect the cattle.

RAW DATA

All of the raw data displayed in this catalogue was taken on 16/8/2013. As close as possible to the sale to provide you with the most up to date information. We value raw data as a performance comparison from within the sale group of bulls.

DELIVERY

No cattle will be delivered on the day of the sale. We will have transport representatives available on the day. It will be our intention to ensure we can help organise the most efficient and safest way to deliver all of the cattle to their new homes. For further information please contact Corey on 0409 182 884.

REBATE

Outside agents that are accompanying a purchaser to the sale are entitled to a 2.5% outside agents rebate. To qualify the agent must register with Ireland's, the agent or in writing or by fax no later than 24 hours before the sale.

HEALTH

The herd is a TB & Brucellosis free herd. The herd is a protected JD herd. All bulls have been tested for Pesti virus and have been treated according to the Zoetis Star program – vaccinated for Vibro. All bulls have been vaccinated with 7in1 and treated with Cydectin.

PHONE BIDDING

If you are unable to make the sale phone bidding can be arranged by contacting the agent or Corey on 0409 182 884.

INSURANCE

We encourage you to insure your purchased lot/s. All care but no responsibility will be taken after the fall of the hammer. It is the purchaser's responsibility for any injury or death. An insurance agent will be in attendance on sale day to cover your requirements.

AIR FACILITIES

Wagga and Albury have airports with daily flights from Melbourne and Sydney. For pick up and drop off please contact either the agents or Corey on 0409 182 884.

CATERING

Complimentary morning and afternoon tea, coffee and cool drinks will be provided on the day and an Angus Beef BBQ before the sale.

ACCOMMODATION

We can arrange accommodation for you either in Wagga Wagga, Holbrook or Tarcutta. Please contact us in plenty of time so we can ensure accommodation.

NUTRITION

The bulls have all been reared under the same conditions. Mid-December, we began feeding the bulls 3Kg of grain per day and at lib hay to get them to the sale. We believe it is important to offer bulls in good working order and not overfed, this is important for longevity.

AFTER SALES SERVICE

We are keen to follow our cattle and ensure they are working in your program to achieve the best possible results. We encourage open communication at all times to monitor progress.

Further information
please contact:

Corey Ireland | 0409 182 884

GUARANTEE

Ireland's Angus Guarantee All bulls have been put through our in-house evaluation process and have been vet checked and fertility tested.

To the best of our knowledge all of the cattle are all in sound working order at the time of the sale. If during the next 18 months, an animal becomes infertile or breaks down due to reasons other than illness, injury or disease contracted after leaving Ireland's, we will:

1. Provide you with a satisfactory replacement as quickly as is practical so as to minimise the disruption to your program or

2. If a replacement is not available, issue you with a full credit (minus salvage value) for the purchase of any one animal at the next Ireland's sale. In some cases buyers maybe requested to supply a veterinary report.

This guarantee is in addition to normal terms and conditions governing auction sales and as such the vendors decision will be final.

It is important to understand that normal care must be taken and good husbandry practices observed, as we cannot replace an animal that is injured or dies for any reason. As such, we recommend you insure animals against injury.

DISCLAIMER

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue and the information neither the vendors, selling agents or representatives thereof assume any responsibility what so ever for the correctness, use or interpretation of the information of animals included herein.

HEALTHY HEIFERS. MATERIALISED INVESTMENT.

Heifers are the future of your herd. They hold the genetic potential of your operation. That's why it's important to protect them from Pestivirus. It's well known that Pestivirus can reduce your reproductive performance. Just a small drop in conception and calving rates can have a significant impact on your bottom line. That's why you should vaccinate all heifers with Pestigard. Vaccinate twice within 6 months, prior to joining, to get the best reproductive performance from your heifers.*

Protect your heifers potential. Vaccinate with Pestigard.

Notes: A bull I like allot. He is a true stud sire in my mind. He is sired by Synergy who just cant put a foot wrong in our program and especially now his first daughters have come into production he is a bull we will use more of. This fellows dam is Galaxy G43 grand dam. She is a magnificent individual who is breeding the house down. This fellow is a big strong sound bull with tremendous hind end and top to him yet has that beautiful angle to the shoulder and holds his head high. This fellow is an exciting bull phenotypically and pedigree wise. We kept this fellow as a youngster and have used him and will retain semen for within herd use. Selling 3/4 share with 100% marketing and possession. 1/4 share retained for within herd use only.

Notes: Wow, great genetics certainly breed on. This fellow is a super interesting individual who I think is a stud sire. He is sired by Edmund E11 who has worked well for us providing great data and structural soundness. His dam is a great young cow who is a sister to Fletcher F1. And can she breed. She is super sound easy doing and milks like a train. This youngster has a great shoulder, holds his head high yet is so well balanced and has length and softness. His raw data is also impressive. He has outstanding phenotype and EBVs to match, what a combination. We are selling 3/4 share, 100% marketing and 100% possession. We will use this fellow in our program this spring. An exciting young sire!!!

Traits Observed: BWT,200WT,400WT,FAT,EMA,IMF

Notes: This fellow I think could be used for stud duties. He is sired by Expedition E264 who is doing a great job here. He is emerging as one of those bulls who we will just keep using, the daughters are impressive and the bulls as well. This fellow is from a great cow who we used in our flushing program last year and again she is breeding so well. I think we have only just scratched the surface of what this cow can do. This fellow is long, thick and super sound with plenty of growth. Have a second look!!

Notes: An impressive son of Exton E21. This fellow is so soft, easy doing with heaps of length and is so sound. Extons flush brothers E27s sons were a real favourite in our 2013 autumn sale group with the tops selling to \$11,000. This fellow is from a great young cow who is really starting to show her ability.

Purchaser: \$

WHAT'S YOUR MARKET?

Buying a bull is an investment for any program.

Whether he costs \$3000 or \$100,000, he will effect your business and breeding program long term.

We are seedstock producers but have the same expectations of our cattle as any commercial producer. Our females are expected to get in calf, have the calf, then rear it, year in year out. We expect cows to operate within the herd with minimal fuss or bother, giving everything to their calf. At weaning, our calves are expected to weigh well, regardless of conditions and environment - as it is \$ per Kg that matters.

With this in mind, we work hard to determine bulls that fit into our program, based on these expectations and the strength of our female herd.

Within our program, we select outside sires and home bred sires to breed to our main focus – predictable, profitable and productive commercial bulls. Within this criteria, from time to time we get exceptional Stud Sires that sell for a lot more money, based on the return they will make through progeny and semen sales.

Based on all this, the following page includes some ideas we feel emphasises the difference between the commercial and stud market. We believe the most important point is to select bulls that benefit YOUR operation. This is where the real value sits.

Cheers

Corey

THE COMMERCIAL SIRE

COMMERCIAL BUYERS CHECKLIST

- 'I want a bull based on his ability to consistently breed thick heavy steers, get my cows in calf and stay sound for as long as I need him'.
- Easy care bulls needed for tough environments
 - Able to run multiple bulls with mobs of females.
 - Solid consistent genetics for steer sales and replacement heifers.
 - Bulls are purchased based on their sale day information, appearance, Breedplan / raw data and will be scrutinized from the day their calves are born.
 - Easy calvers
 - Weight and growth at sale time
 - Bulls Ready to work

COW HERD

RETURN

- Selling steers, Kgs = \$
- Replacement Heifers for within the herd
- Heifers, \$ = Kgs or for breeding

IRELANDS BULLS TICK THE BOXES

Pedigree - generations of consistent genetics.

Carcass value and maternal strength.

Vaccinated, health checked, semen tested, are sound and virus free.

Bull Guarantee and service commitment (w orking together for the best outcome).

SELECTING A BULL BASED ON YOUR PROGRAM DETERMINES YOUR RETURN ON INVESTMENT

Our breeding program is focused on supplying quality bulls with a guarantee. The majority of our bulls sell into commercial operations, and 5-10% as top end Stud Sires around the country and internationally. We run all our bulls under the same conditions and have high expectations for all of them, no matter which market and regardless of price.

THE STUD SIRE

'I want a bull to stamp my herd and females for generations, I want him and his genetics to promote my stud image by using him and through his sons and daughters'

SEEDSTOCK PRODUCERS CHECKLIST

- A bull to breed bulls for private sales / auction
- Opportunity to sell semen
- Market their genetics through good females and sires.
- Promote and use Breedplan figures and raw data.
- Bulls are purchased on genetic history, female lines, EBV's, potential marketing of progeny and genetics and the influence they will have on their daughters as much as their sons.
- Temperament, feet, longevity and fertility, factor heavily into purchase.

COW HERD

RETURN

- Male progeny sold as stud bulls (Approx \$3000)
- Female progeny can be marketed as elite or stud females or be used to breed further. If they are very good, they can be flushed and used to 'leap frog' your program.
- Semen straws can be sold from your bull to help recuperate the cost of his purchase.
- Marketing value for your stud to clients.

INVESTING IN A BULL IS A BALANCE OF WHAT YOU PAY TODAY AND THE VALUE HE ADDS TO YOUR PROGRAM OVER THE NEXT 10 YEARS.

YOU DON'T HAVE TO BUY THE MOST EXPENSIVE BULL, SIMPLY THE BULL THAT SUITS YOUR NEEDS. **PICK THE BULLS THEN APPLY THE BUDGET.**

A selection of bulls for ALL PRICE RANGES = Value for \$

Easy care profitable cattle

BETTER BULLS = BETTER PROFITS

CONSISTENT GENETICS = More impact on your herd

FERTILITY = (Calves on the ground) = profit

LONGEVITY = Profit

MORE WEIGHT = Profit

Bringing a New Bull Home

© Angus Australia 2009. No part of this may be reproduced without prior permission from Angus Australia

Buying a bull is a long term investment in the future genetics and sale income of your herd. To get the most from your new bull, it pays to look after him well, especially in the first season of use.

At the Sale

Many factors need to be taken into consideration when buying a bull. These include growth, fertility, carcase value, structural soundness and temperament. At a bull sale, inspect the bulls in the yards or pens and note any unusual behaviour or activity. Beware of bulls that are continually pushing to the centre of a mob, running around, unreasonably nervous, aggressive or excited. Note this behaviour in the sale catalogue and don't bid on these bulls.

The behaviour of some bulls may change during an auction. Bulls that are quiet in the yard or paddock may not like the pressure and noise of an auction and become excited. Others that were excited before often get much worse in the sale ring. Behaviour in the yard or pen prior to the sale is a much better guide to temperament than behaviour shown in the sale ring.

After the Sale

At auction sales, remember that possession is yours after the fall of the hammer, so careful treatment of animals from that point

on is important. Insurance against loss in transit, accidental loss of use or infertility is sometimes provided by vendors. Where it is not, it is worth considering insurance to cover transport and the first three to six months of use.

Complete the delivery instructions supplied by the vendor or agent.

Before you take delivery of your new bull, ask what health treatments he has received. For example, has he been vaccinated with 5-in-1? How often? When was it last done? Has he been vaccinated for Vibriosis? Leptospirosis? Three-day sickness? Bovine viral diarrhea virus?

Ask about the handling and stock movement methods that have been used with your new bull: dogs, horses, bikes, vehicles.

If you take the bull home yourself, consider the following:

- Handle him quietly at all times, no dogs, no buzzers. Talk to the bull and give him time and room to move. Your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.
- If you buy bulls from different vendors, you should separate them on the truck.
- Make sure that the truck floor is covered with sand, sawdust or a floor grid to reduce the risk of bulls being injured or going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull and let them run with the bull in a yard for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into your state (for example, dipping for ticks or testing for Johne's Disease).
- When you use a professional carrier:
- Make sure the carrier knows which bulls can be mixed together.
- Discuss resting procedures for long trips, expected delivery time, delivery and contact instructions, truck condition and quiet handling.

Drive carefully or your bull may end up like this.

- Give the bull's ear tag and brand numbers to the carrier and get the carrier's phone number.
- When buying bulls from far away, you may have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

Aim to get the bull home at least 1-2 months before the start of the breeding season. This will provide time for bulls to overcome the stresses of the sale and being moved to a new location and adjust to their new environment.

Arrival

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when purchased. Bulls can become upset and excited in the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of house cows, steers or herd cows. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water then leave the bull alone until the next day, before giving routine health treatments.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually.

For example, if they have not been treated before, all bulls should be drenched for worms, fluke if necessary, treated for lice and vaccinated with:

- 5-in-1 vaccine
- vibriosis vaccine
- leptospirosis vaccine in areas where it exists
- three-day sickness vaccine in areas where it can cause problems
- tick fever vaccine for bulls introduced into tick areas

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. Vaccinated bulls are free from vibriosis so vaccinating bulls against the disease should be a routine practice. Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Keep the bull away from any females that may come on heat until both initial vaccinations are completed.

When working bulls through the yards, handle them with care. Preferably work them with other cattle and do not use force unless absolutely necessary.

After administering routine health treatments, leave the bulls in

the yards for the next day or two on feed and water to settle down with other stock for company. A bull's behaviour will determine how soon it can be moved out to paddocks.

Mating New Bulls

Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as "expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining". This expectation would apply to 2 year old bulls, but not to younger bulls.

Yearling Bulls

In recent years the selling of yearling bulls has become more common. Don't overwork young bulls. Mating loads of only 25-30 females are recommended for yearling bulls.

Managing Older Herd Bulls

Older working bulls also need special care and attention before mating starts.

They should be tested or checked annually well before the joining for physical soundness, testicle tone and serving ability. For older bulls a serving ability test is useful as it makes diagnosis of problems such as arthritis and lameness easier. All bulls to be used must be free moving, active and in good store condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

All bulls should be drenched, treated for lice and vaccinated with 5-in-1 and for vibriosis, annually. They may also need leptospirosis and three-day sickness vaccinations in some areas.

During Mating

- Check bulls at least twice each week for the first two months. Get up close to them and see each bull walk; check for swellings around the sheath and for lameness. Watch them work if possible and pay particular attention to any sign of abnormal serving problems like "corkscrew penis" or too many cows returning to heat.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately. If you have to replace a bull, get the bull checked by your vet. Sometimes prompt

treatment for small problems can avoid culling. Vendors that provide guarantees on their bulls will usually require a veterinary certificate indicating the problem with unsatisfactory bulls.

- Rotate bulls in single sire groups to make sure that any bull infertility is covered. Single sire joining works well but it has risks. The bulls must be checked regularly and carefully or the bulls rotated every one or two cycles. If you need to record sire lines, it may pay to use similarly bred bulls in any rotation or this requirement is hard to achieve.
- Yearling bulls are still growing strongly, so tend to be leaner, carrying less body fat reserves. The condition of the yearling bulls is critical. If they drop below condition score 3 sperm production may be impaired. In extensive conditions with only average or poor quality feed, the joining season should be restricted to 6-8 weeks.

After Mating

- Look after bulls. Feed them well.
- Pregnancy test females and cull infertile bulls.

Taking Bulls to Northern Australia

The environment in northern Australia can be particularly challenging for British Breed bulls. Experience shows that properly handled, Angus bulls can adapt to the heat and extensive rangeland conditions giving good calf crops and productive working lives. The

A quiet easily handled bull can result from taking a few simple steps.

If you buy bulls from different vendors, make sure you separate them on the truck.

following suggestions are offered for those looking to use Angus bulls in northern areas:

- Buy bulls younger and take them north to acclimatise well before the breeding season starts. Yearling bulls have adapted well when given time to acclimatise but they need to be fed well enough to allow adequate growth before the mating season begins.
- Select bulls with a slick coat type. Where possible establish what the bull's coat was like as a calf also.
- Buy structurally sound bulls, preferably grass fed without excessive condition. These bulls will adapt quickly and suffer less setback when taken north.
- Use Angus bulls by themselves, don't mix them with older, fully grown bulls or mickeys. They will not get as many calves in mixed mating groups if the other bulls dominate simply because they are older and better adapted.
- After the mating season ends, pull the Angus bulls out and look after them in preparation for the following season. They may need a bit of better feed or supplement during the dry season.
- In "ticky" areas, "blood" the Angus bulls on arrival. Angus bulls may need more treatment for ticks and buffalo fly than Bos indicus bulls but no more so than other British breeds.
- Provide shade where possible

There are many of examples of successful crossbreeding with Angus in northern Australia. The crossbred calves are fast growing, mid maturing with excellent carcasses. The crossbred females are highly fertile and productive.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

A new bull is a big investment – look after him and you will be rewarded.

Checklist for Bringing a New Bull Home

- ☑ Insurance
- ☑ Carrier Instructions
- ☑ Health Policy
- ☑ Settle In Properly
- ☑ Health Treatments
- ☑ Joining Management
- ☑ Annual Testing and Health Treatment
- ☑ Regular Checking
- ☑ Buy Bulls that Suit Your Needs
- ☑ Protect Your Investment

Angus bulls can handle northern conditions but need to be managed differently...but the results are worth it.
